### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Tollefson on 5/12/09.

The application has been amended as follows:

**Claim 28.** A computer implemented method for executing block trades for a security, comprising:

- receiving a block trade request, at a computer system, said block request including a quantity of shares of the security to be traded over a portion of a market day for a trade forum;
- ~~generating a plurality of executable trade orders to implement said block trade request according to a trading strategy;~~
- ~~selected from a plurality of trading strategies, including:~~
- dividing, via said computer system, ~~a trading~~ the market day into a plurality of time bins;
- for a the received block trade request, computing, within a computer system, the historical average share volume for said security for each time bin over a

predetermined period of time in the past and determining historical share volume percentages for said security for each time bin over said predetermined time in the past;

- multiplying, via said computer system, the number of shares requested by the historical share volume percentages for each time bin over said predetermined time in the past to determine the number of shares to be allocated within each time bin in the future; and
- generating, via said computer system, executable trade orders for said allocated numbers of shares within each time bin in the future ~~in accordance with said selected trading strategy algorithm~~; and
- executing, via said computer system, said executable trade orders in a trade forum within each time bin in the future ~~at different times determined by said selected trading strategy algorithm~~.

#### ***Allowable Subject Matter***

**Claims 28 – 33 and 39 - 40** are allowed.

The following is a statement of reasons for indication of allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art fails to teach or suggest the limitations of:

- for the received block trade request, computing, within a computer system, the historical average share volume for said security for each time bin over a predetermined period of time in the past and determining historical share volume percentages for said security for each time bin over said predetermined time in the past; and
- multiplying, via said computer system, the number of shares requested by the historical share volume percentages for each time bin over said predetermined time in the past to determine the number of shares to be allocated within each time bin in the future. (as in Claim 28).

It is old and well known in the art to program a computerized system to execute trades for a security based upon algorithms in which a trade is executed when current market data satisfies predetermined criteria.

Furthermore, it is also old and well known in the art to convert one trade for a large quantity of shares (i.e. block trades, iceberg orders) into a sequence of trades, each consisting of smaller quantities, to reduce disruptive effects on the market. Purchasing a large quantity, all at one time, would result in inflating the price, while the sale of a large quantity, all at one time, would result in depressing the price. Therefore, by "drip-feeding" a large trade into the market would prevent such an adverse price fluctuation.

The instant application distinguishes from these old and well known practices by claiming a specific algorithm for allocating the total quantity of shares over time which is not disclosed in the prior art.

Freeny (US Patent 6,594,643) discloses a method/system for to execute trades for a security based upon algorithms in which a trade is executed when current market data satisfies predetermined criteria. Neither this patent, alone nor in combination with others, discloses nor suggests the feature of allocating the total quantity of shares over time in accordance with the claimed algorithm.

Armstrong (Armstrong, Paul. *Exchanges Closer to Single Stock Market*. Times. September 24, 1999) discloses a general method/system to convert one trade for a large quantity of shares into a sequence of trades, each consisting of smaller quantities. Neither this non-patent literature, alone nor in combination with others, discloses nor suggests the feature of allocating the total quantity of shares over time in accordance with the claimed algorithm.

Business Lawyer (*Large Order Execution in the Futures Markets*. 44 *The Business Lawyer* 1335. August, 1989) discloses a general method/system to convert one trade for a large quantity of shares into a sequence of trades, each consisting of smaller quantities. Neither this non-patent literature, alone nor in combination with others, discloses nor suggests the feature of allocating the total quantity of shares over time in accordance with the claimed algorithm.
